A form fitted into a box

The box is drawn so the difference can be seen. Both placements name the same rectangle; only `-fitMode` differs.

`-fitMode contain`: the whole form is inside

`-fitMode cover`: the box is covered, the rest cut off

`-align` and `-valign`, in the same 30 by 18 box:

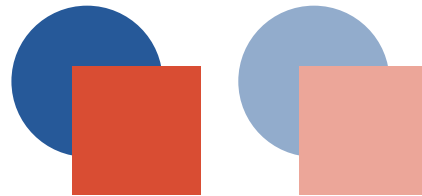

`-align left -valign top`

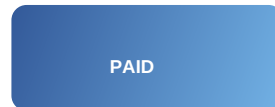

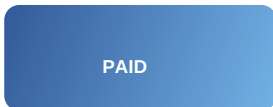

`-align center -valign middle`

`-align right -valign bottom`

the same form opaque and at `-opacity 0.5`:
the square hides the disc in both

one form, its gradient created inside it, placed twice
