write the reason on the return form - a word is enoughput the form on top and close the carton with the original tapehand the carton to the carrier named at the project pageA carton returned any other way is not accepted.

As set with -markup tags:

What the parcel carries

The delivery note lists every item, and the items are checked against it on arrival:

- the **invoice**, printed and as PDF on the enclosed card
- the *packing list*, one line per carton
- the return label, valid for thirty days

How to return a carton

Three steps, in this order:

1. write the reason on the return form - a word is enough
2. put the form on top and close the carton with the **original tape**
3. hand the carton to the carrier named at the project page

A carton returned any other way is not accepted.

Lists written in Markdown

As typed:

What the parcel carries

The delivery note lists every item, and the items are checked against it on arrival:

- the **invoice**, printed and as PDF on the enclosed card
- the *packing list*, one line per carton
- the return label, valid for thirty days

How to return a carton

Three steps, in this order:

1. write the reason on the return form - a word is enough
1. put the form on top and close the carton with the **original tape**
1. hand the carton to the carrier named at [the project page](https://fossil.sowaswie.de/tclpdf)

A carton returned any other way is not accepted.

As set with -markup markdown:

What the parcel carries

The delivery note lists every item, and the items are checked against it on arrival:

- the **invoice**, printed and as PDF on the enclosed card
- the *packing list*, one line per carton
- the return label, valid for thirty days

How to return a carton

Three steps, in this order:

1. write the reason on the return form - a word is enough
2. put the form on top and close the carton with the **original tape**
3. hand the carton to the carrier named at the project page

A carton returned any other way is not accepted.

Both notations break into 11 lines, and the lines are identical, runs and options alike - the underline apart, which Markdown has no spelling for. The numbers in the Markdown source are all 1.; the package counts.
