

A stencil mask under a grey output intent

PDF/A-3B, output intent ISOcoated_v2_grey1c_bas.ICC. The stamp below is the same one-bit file as on the other page. It carries no colour space at all (ISO 32000-2, Table 87: with ImageMask true ColorSpace shall not be specified), so ISO 19005-2, 6.2.4.3 has nothing to judge it by - what is judged is the DeviceGray fill it is painted with. The photograph beside it is the greyscale JPEG under the same soft mask, and a soft-mask image is DeviceGray by Table 143.

What this document may not carry: -interpolate 1. ISO 19005-2, 6.2.8 says the Interpolate key shall not be present or shall be false, and both orders are refused - declared-first: INTERPOLATE; placed-first: INTERPOLATE. Smoothing is the reader's decision, and an archive format takes it away so that the same file looks the same in twenty years.
