

Spans and widths

A timetable

The ferry runs on two lines. The season heading spans four columns; the vessel name spans the rows it applies to.

Summer timetable, 1 May to 30 September				
Vessel	Departure	Arrival	Line	Fare
MS Nordwind	07:15	08:40	Harbour - Island	12.50
	11:30	12:55	Harbour - Island	12.50
	16:45	18:10	Harbour - Island	12.50
MS Suedwind	09:00	09:50	Island - Lighthouse	6.00
	14:20	15:10	Island - Lighthouse	6.00
Replacement bus on 12 August				free
Day pass, both lines				16.00

The second and third rows carry no vessel cell at all - the span from above occupies that position, exactly as in HTML.

Fixed, weighted, automatic

Code	Description	Note	Qty
A-1	Short	one	3
B-22	A description long enough that the column has to be given room for it	two	14
C-333	Medium length text here	three	7

Column 1 is fixed at 20 mm, column 4 at 16 mm. Column 3 carries a weight, column 2 is automatic - and gets the larger share because its content needs it.

Too wide for the page

Twelve columns - 26 mm each but for the 24 mm date column - are 310 mm wide. With -horizontalBreak the table is dealt out over further pages, and -repeatColumns 2 keeps the station and the date on every one of them.

A span across a page break

The shift roster below is long enough that the break falls right where the two-day block starts. Watch the bottom of this page: the block is not started here, it is moved whole to the next one.
