

Activity report - a Markdown column, a cell of runs, a cell of tags

The activity column is Markdown by its column description; the fourth row was written as the list of runs a program builds from data, the fifth says "markup tags" for an underline, the sixth "markup plain" and keeps its asterisks; the seventh holds a Markdown list, the eighth a numbered list in tags. The rows are as tall as their bold words and their items make them, and every first line stands on the baseline of the date beside it.

Date	Activity	Hours
2026-09-01	Mueller GmbH - kick-off, requirements taken down and confirmed in writing	3.5
2026-09-02	Schmidt AG - migration of the invoice templates; the estimate of 4- ~~h~~ 2 <i>h</i> held	2
2026-09-03	Mueller GmbH - review, see <u>ticket 4711</u>	1.5
2026-09-04	Weber & Sohn - on-site training, <i>invoiced separately</i>	4
2026-09-05	Schmidt AG - <u>final acceptance</u> signed	1
2026-09-06	internal: note the **bold** markers are meant literally here	0.5
2026-09-07	Mueller GmbH - maintenance, which covers in particular: • the removal of minor faults in running operation, • the answering of simple questions by telephone	2
2026-09-08	Schmidt AG - support in three steps: 1. the call taken and logged 2. a remote session 3. the <u>written</u> report	1.5
Total		16

What a cell of runs is refused for

text and runs in one cell:	TCLPDF TABLE CELL runs - tclpdf: a cell holds its content as text or as runs, not both - the runs are the text with its faces, so drop the text key
markup written as a pair:	TCLPDF TABLE CELL markup - tclpdf: markup names the notation the cell's text is written in - tags or markdown - and the string itself stands under text: write {text {a **b** } markup markdown}
runs in a decimal column:	TCLPDF TABLE CELL decimal - tclpdf: a cell set as runs cannot be aligned on a decimal separator - the column hangs one string on one separator, and a line of pieces has none; give the cell align left, right or center, or set the figure as text
a heading inside a cell:	TCLPDF TABLE CELL paragraph heading - tclpdf: a run in a table cell cannot carry "heading" - a heading sets its own size and leading, and the lines of a cell are one leading, which is how the row knows how tall it is; set the words as a bold run, or put the heading above the table
a notation left open:	TCLPDF TEXT MARKDOWN OPEN ** 2 - tclpdf: *** at position 2 is still open at the end of the text - close it, or write it with a backslash in front to make it text

A fallback the caller writes: didParseCell

2026-09-09	a closed run sets	1
2026-09-10	an *open run is set as typed	1
