

Schadensmeldung

The boxes below are real form fields, not drawings. Open this file in a reader that knows forms and type into them; what you type replaces the appearance stream tclpdf drew, from the /Tx marked-content mark to its matching EMC.

Name

Vertragsnummer

Schadenhoehe

Hergang

Aktenzeichen

Kennwort

What stands in the file

The read-only field carries /Ff 1, the multiline one /Ff 4096, and the right-aligned one /Q 2. The password field carries /Ff 8192 and NO value at all: Table 231 says a PDF processor shall never store the value of a password field in the file, so tclpdf refuses -value there rather than writing a password into a file anyone can open with a text editor.

/NeedAppearances is not in this file. Its absence means false, which is what qpdf reports below - and every field brought its own appearance stream instead.

Check it yourself

```
qpdf --json --json-key=acroform 09.01-form-fields.pdf
```

```
qpdf --qdf --object-streams=disable 09.01-form-fields.pdf - | grep -B2 -A12 Widget
```

```
qpdf --qdf --object-streams=disable 09.01-form-fields.pdf - | grep -n 'Tx BMC'
```
